SPECIFICATIONS

(DIN 45 500)

■ AMPLIFIER SECTION

40 Hz~20 kHz continuous power output	
both channels driven	2 × 85W (8Ω)
1 kHz continuous power output	
both channels driven	2 × 100W (8Ω)
Total harmonic distortion	
rated power at 40 Hz~20 kHz	0.09% (8Ω)
rated power at 1 kHz	0.05% (8Ω)
half power at 1 kHz	0.03% (8Ω)
Intermodulation distortion	
rated power at 60 Hz: 7 kHz=4:1, SMPTE, 8Ω	0.09%
Power bandwidth	
both channels driven, −3 dB	10 Hz~20 kHz (8Ω, 0.09%)
Damping factor	40 (8Ω)
Input sensitivity and impedance	
PHONO	2.5 mV/47kΩ
TUNER, CD/AUX	150 mV/47kΩ
TAPE 1, 2/EXT	150 mV/47kΩ
PHONO maximum input voltage (1 kHz, RMS)	140 mV
S/N	
rated power (8Ω)	
PHONO	70 dB (IHF, A: 70 dB)
TUNER, CD/AUX, TAPE 1, 2/EXT	70 dB (IHF, A: 90 dB)
Frequency response	
PHONO	RIAA standard curve ±0.8 dB (30 Hz~15 kHz)
TUNER, CD/AUX, TAPE 1, 2/EXT	10 Hz~60 kHz (−3 dB)
Tone controls	
BASS	50 Hz, +10 dB~−10 dB
TREBLE	20 kHz, +10 dB~−10 dB
Loudness control (volume at −30 dB)	50 Hz, +9 dB
Muting (using the remote-control transmitter)	−20 dB
Output voltage	
REC OUT	150 mV
Channel balance, CD/AUX 250 Hz~6,300 Hz	±1 dB
Channel separation, CD/AUX 1 kHz	50 dB
Headphones output level and impedance	670 mV/330Ω
Load impedance	
MAIN or REMOTE	8Ω~16Ω
MAIN and REMOTE	8Ω~16Ω

■ GENERAL

Power consumption	470W
Power supply	
For Australia and United Kingdom	AC 50 Hz/60 Hz, 240V
For continental Europe	AC 50 Hz/60 Hz, 220V
For others	AC 50 Hz/60 Hz, 110V/127V/220V/240V
Batteries	DC 3V (2 "AA" size batteries, R6 or equivalent)
Dimensions (W×H×D)	430 × 119 × 240 mm (16-15/16" × 4-11/16" × 9-7/16")
Weight	7.1 kg (15.6 lb.)

Note:

Total harmonic distortion is measured by the digital spectrum analyzer (H.P. 3045 system).

Specifications are subject to change without notice for further improvement.

Technics

Matsushita Electric Trading Co., Ltd.
P.O. Box 288, Central Osaka Japan

NOTES :

1. The power of the tuner and tape deck in this system are supplied through the amplifier. When servicing these components, prepare an each model or an external power supply (servicing power JIG Part No. : SZZA1058C).
   (For how to use the JIG, refer to the Service Manual of tuner.)
2. Prepare a transmitter and an amplifier when checking each model of system for its performance using the remote control.

■ CONTENTS

■ ACCESSORIES

• AC power supply cord ..... 1 	• Connection cable for remote-control ..... 1 	• Plug (SJP5219–1) 	• Plug adaptor (SJP9215) • Flat cable for remote-control .... 1 	• Batteries ..... 2 	• Remote-control transmitter ..1  Transmitter ass'y is not supply for replacement part.	

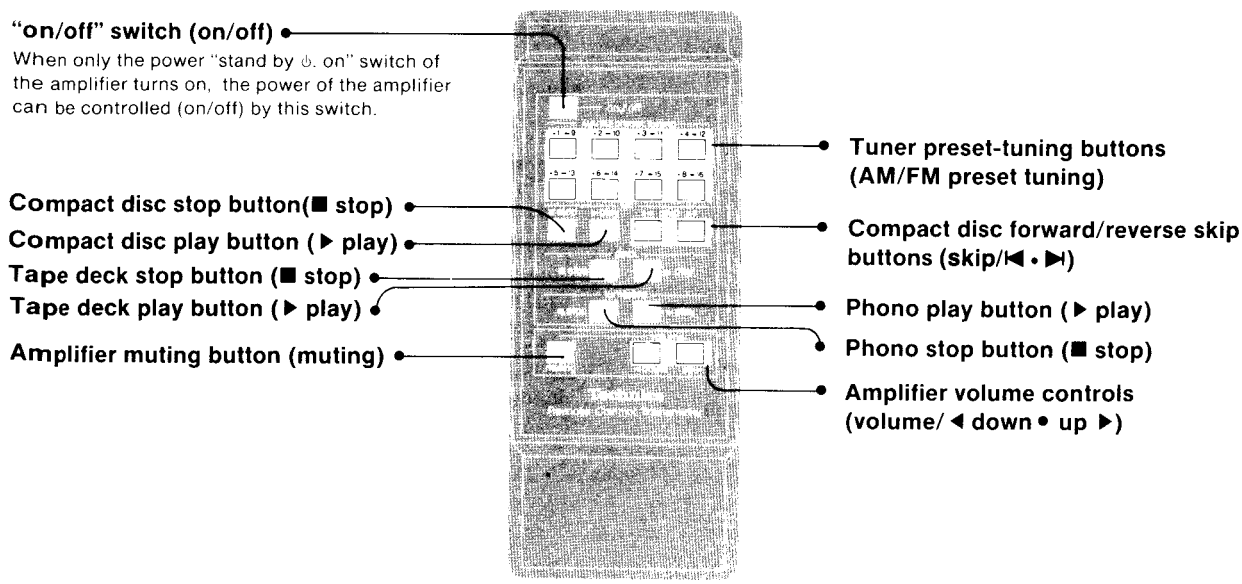
■ LOCATION OF CONTROLS



Power "stand by ⏻ . on" switch/indicator

This switch turns on and off the secondary circuit power only. The unit is in the "stand-by" condition when this switch is set to the "stand by ⏻" position. Regardless of the switch setting, the primary circuit is always "live" as long as the power cord is connected to an electrical outlet.

When the power is turned on, the program source which was heard when the power was last turned off can be heard.

Peak-power meters

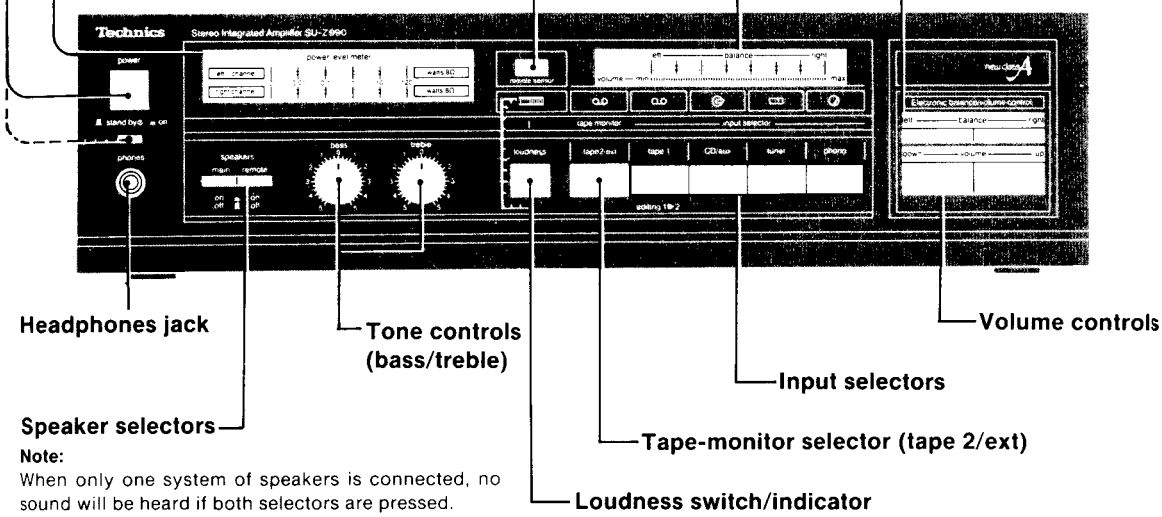
Note:

If speaker systems with an impedance of 8 ohms are connected, the actual value can be read directly. If, however, the impedance is 16 ohms, the actual output value is 1/2 of the indicated value.

$$\text{Actual output} = \frac{\text{indicated value} \times 8\ \Omega}{\text{speaker impedance } (\Omega)}$$

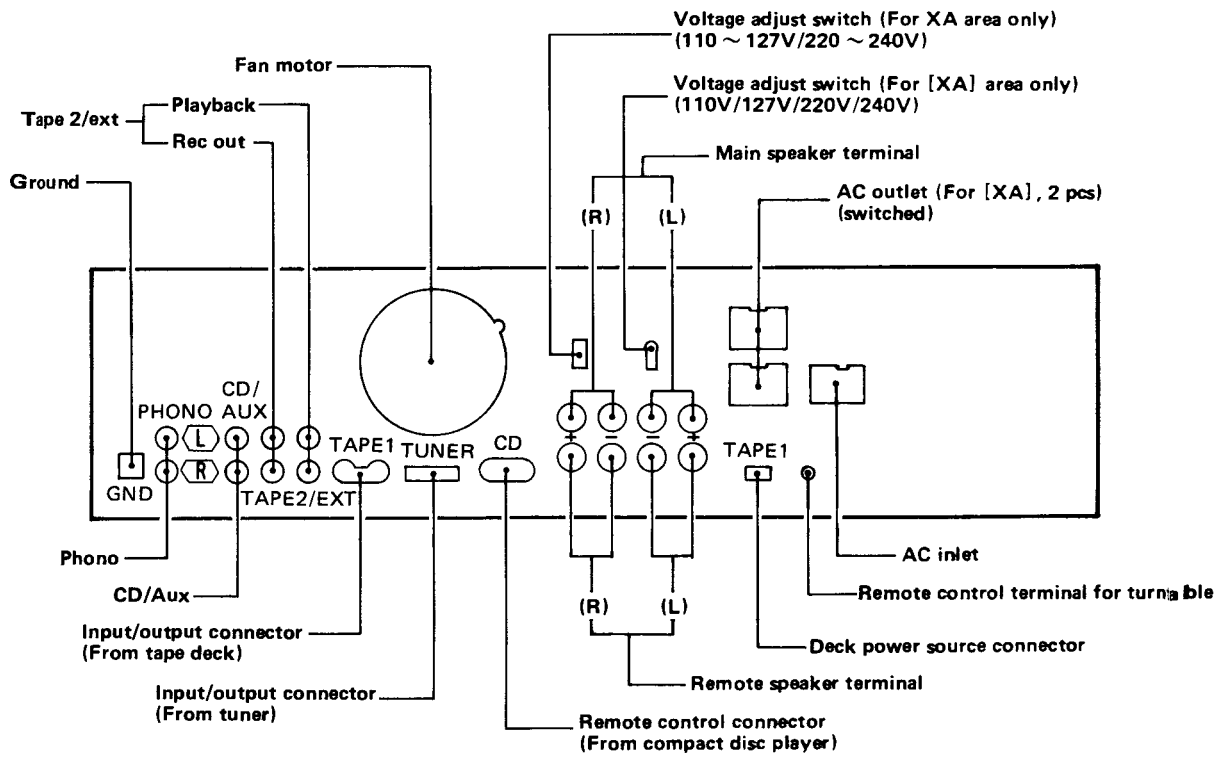
Volume/balance level indicator

This indicator usually shows the volume level; when the balance control is pressed, however, the position of balance level is displayed for five seconds, after which the display returns again to indication of the volume level. When the amplifier muting button on the remote-control transmitter is pressed, the indicator corresponding to the maximum displayed volume level point will flash.



Note:

When only one system of speakers is connected, no sound will be heard if both selectors are pressed.

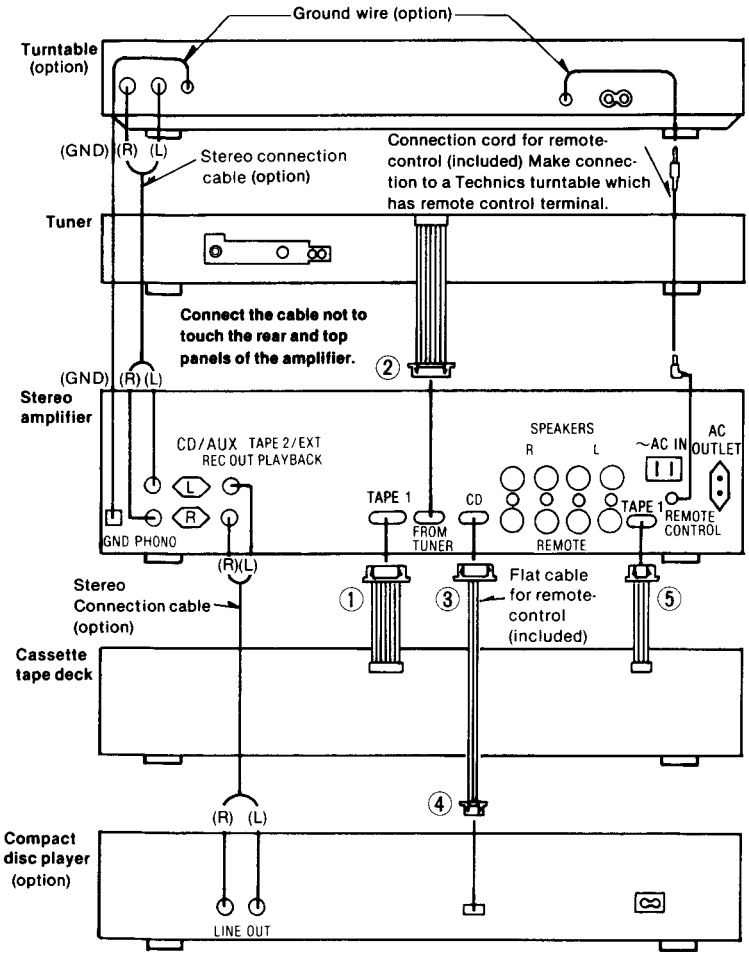


■ CONNECTIONS

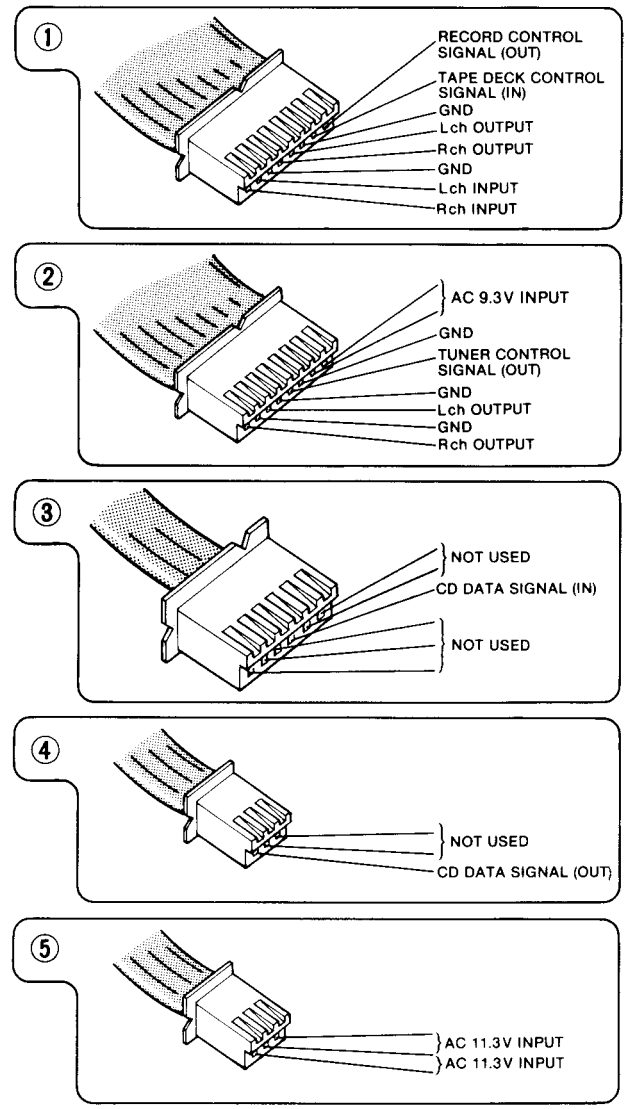
Connect the turntable, tuner, amplifier, cassette deck, and CD player as shown.

If the connection is wrong, normal operation will not be attalbed.

Tuner (ST-Z990/Z990L) and Cassette deck (RS-D225W) is not equipped with power supply. So, the amplifier shown or power supply JIG is necessary for the repair and check of Tuner or Cassette deck.



※ Flat cables for remote-control should be connected correctly. If connections are wrong, the units do not function correctly.



■ PROTECTION CIRCUITRY

The protection circuitry may have operated if either of the following conditions is noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of this unit are used.

If this occurs, follow the procedure outlines below:

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

Note

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

■ BEFORE REPAIR AND ADJUSTMENT

(1) Turn off the power supply. Using a 10Ω, 5W resistor, shortcircuit both ends of power supply capacitors (C601, C602) in order to discharge the voltage.

(2) Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current at 50Hz in NO SIGNAL mode should be shown below with respect to supply voltage 110V/127V/220V/240V.

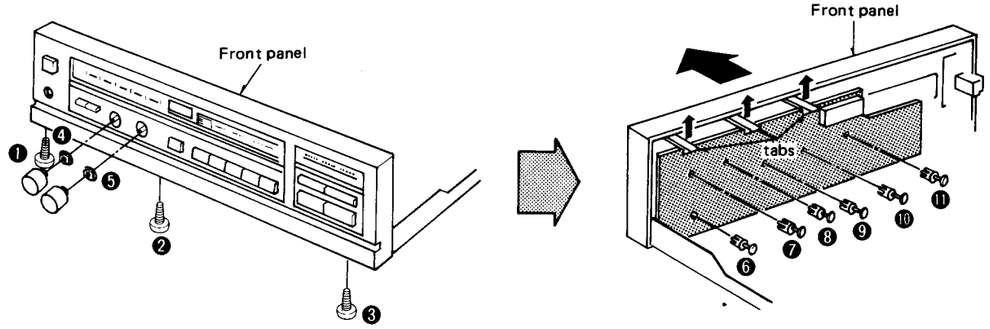
Power supply voltage		AC110V	AC127V	AC220V	AC240V
Consumed current	50Hz	250 ~ 500mA	200 ~ 450mA	150 ~ 400mA	100 ~ 350mA

■ DISASSEMBLY INSTRUCTIONS

Ref. No. 1 — **How to remove the front panel**

Procedure 1

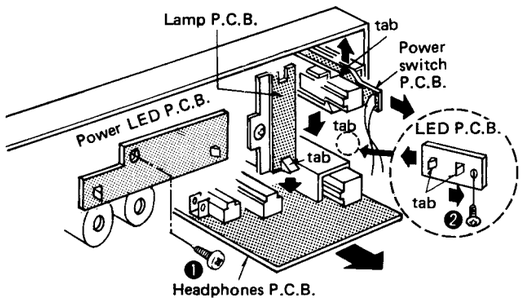
1. Remove the cabinet.
2. Remove the 3 screws (❶ ~ ❸).
3. Remove the 2 nuts (❹ , ❺).
4. Remove the 6 nylone rivet (❻ ~ ⓫).
5. Remove the 3 tabs.
6. Remove the front panel



Ref. No. 2 — **How to remove the sub P.C.B.**

Procedure 1 → 2

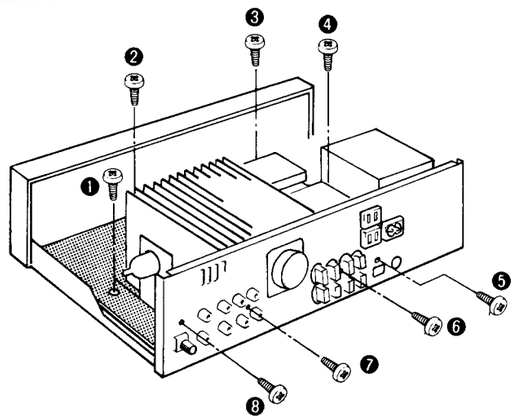
1. Remove the 1 screw (❶).
2. Remove the power LED P.C.B.
3. Remove the 1 screw (❷) and 2 tabs.
4. Remove the LED P.C.B.
5. Remove the 3 tabs.
6. Remove the lamp P.C.B., power switch P.C.B. and headphones P.C.B.



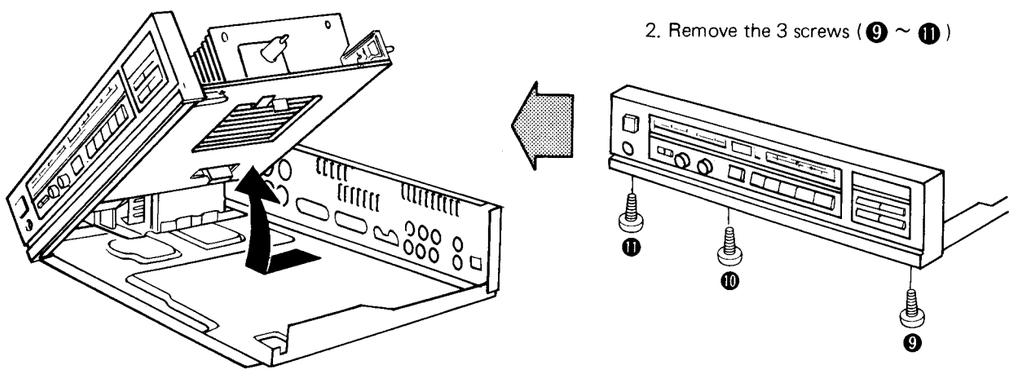
Ref. No. 3 — **How to remove the main P.C.B.**

Procedure 3

1. Remove the 8 screws (❶ ~ ❽)



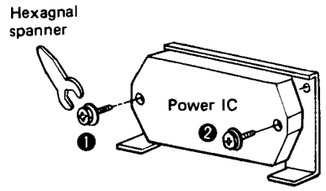
2. Remove the 3 screws (❾ ~ ⓫)



Ref. No. 4 — **How to remove the Power IC**

Procedur

1. Remove the 2 screws (❶ , ❷) by spanner or plier.
2. Unsolder the power IC.

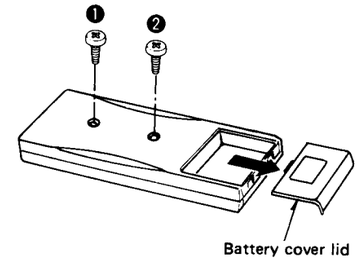


● When mounting the power IC, apply silicon compound (SZZ0L15) to the rear of the power IC.

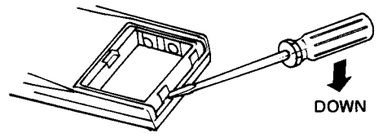
Ref. No. 5 — **How to remove the remote control**

Procedure 5

1. Remove the Battery cover lid.
2. Remove the 2 screws (❶ , ❷)



3. Insert a blade screwdriver between the upper and lower covers inside the battery compartment and them slowly loosen the bottom cover.



■ FUNCTION OF IC TERMINALS

● **IC202 (TC9177P) Attenuator**

Pin No.	Mark	Description
1	V_{SS}	Power supply (negative).
2, 3 18, 19	CH1-Loudness 1, 2 CH2-Loudness 1, 2	Loudness terminal.
4 17	CH1-OUT 1 CH2-OUT 1	10dB attenuator output. Signal via IN is attenuated by 8 steps, 10dB each, from 0 ~ 70dB.
5 16	CH1-IN 1 CH2-IN 1	10dB attenuator input.
6 15	A-GND	AC grounding terminal.
7 14	CH1-IN 2 CH2-IN 2	2dB attenuator input.
8 13	CH1-OUT 2 CH2-OUT 2	2dB attenuator output. Signal via IN is attenuated by 5 steps, 2dB each, from 0 ~ 8dB.
9	GND	Grounding terminal.

Pin No.	Mark	Description
10	CK	Clock input. Used to take in data at DATA pin.
11	DATA	Attenuation/channel select data input. 20-bits input activated by CK signal.
12	ST	Strobe input. Attenuation/channel select data from DATA and CK pins are lapped when this pin is at "H" level. Previous data remain the same while this pin does not reach "H" level.
20	V_{DD}	Power supply (positive).

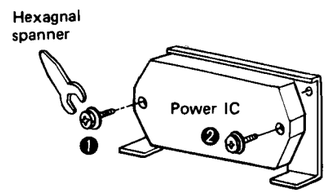
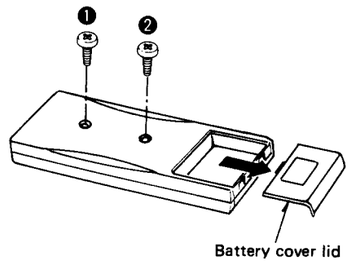
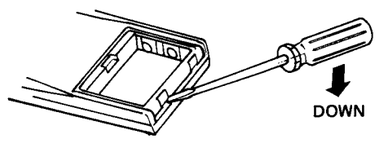
Ref. No. 4	How to remove the Power IC
Procedur	1. Remove the 2 screws (❶, ❷) by spanner or plier. 2. Unsolder the power IC.



- When mounting the power IC, apply silicon compound (SZZ0L15) to the rear of the power IC.

Ref. No. 5	How to remove the remote control
Procedure 5	1. Remove the Battery cover lid. 2. Remove the 2 screws (❶, ❷) 3. Insert a blade screwdriver between the upper and lower covers inside the battery compartment and them slowly loosen the bottom cover.





■ FUNCTION OF IC TERMINALS

• IC202 (TC9177P) Attenuator

Pin No.	Mark	Description
1	V_{SS}	Power supply (negative).
2, 3 18, 19	CH1-Loudness 1, 2 CH2-Loudness 1, 2	Loudness terminal.
4 17	CH1-OUT 1 CH2-OUT 1	10dB attenuator output. Signal via IN is attenuated by 8 steps, 10dB each, from 0 ~ 70dB.
5 16	CH1-IN 1 CH2-IN 1	10dB attenuator input.
6 15	A-GND	AC grounding terminal.
7 14	CH1-IN 2 CH2-IN 2	2dB attenuator input.
8 13	CH1-OUT 2 CH2-OUT 2	2dB attenuator output. Signal via IN is attenuated by 5 steps, 2dB each, from 0 ~ 8dB.
9	GND	Grounding terminal.
10	CK	Clock input. Used to take in data at DATA pin.
11	DATA	Attenuation/channel select data input. 20-bits input activated by CK signal.
12	ST	Strobe input. Attenuation/channel select data from DATA and CK pins are lapped when this pin is at "H" level. Previous data remain the same while this pin does not reach "H" level.
20	V_{DD}	Power supply (positive).

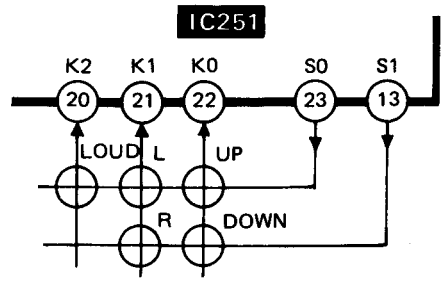
• IC251 (LC6523C–3068) Microcomputer

Pin No.	Mark	Description
① ③ ④ ⑤ ㉘ ㉙ ㉚	LED 4 LED 5 LED 6 LED 7 LED 1 LED 2 LED 3	"L" level output is given to each pin according to the volume attenuation in order to light up the volume level LED. ○ mark = Light up = "L" level output –dB / LED / Pin No.: 0~–4dB ㉘○ ㉙○ ㉚○ ①○ ③○ ④○ ⑤○; –6~–10 ㉘○ ㉙○ ㉚○ ①○ ③○ ④○; –12~–18 ㉘○ ㉙○ ㉚○ ①○ ③○; –20~–26 ㉘○ ㉙○ ㉚○ ①○; –28~–36 ㉘○ ㉙○ ㉚○; –38~–52 ㉘○ ㉙○; –54~∞ ㉘○
⑥	BACK-UP	• When this pin is at "L" level, the microcomputer is operated by the back-up circuit.(No. ⑲ pin alone receives an input, all the others not.) • When this pin is at "H" level, No.⑨pin (POWER ON) gives an "L" level output if No. ⑫ pin (POWER SW) is at "H" level. No.⑨pin (POWER ON) is at "H" level, however, if the remote control's power on/off RAM data are off.
⑦	REMOTE	• Data codes reach here from the remote control receiver. (For data codes, refer to the remote control transmitter description.) • The compact disc player's data codes are outputted from the light receiver direct to the player.
⑧	AMP	• When this pin receives an "H" level input, the amplifier turns on to start the operation. • When this pin receives an "L" level input, the amplifier turns off to stop receiving the matrix key. Power on/off code alone is used to enable the remote control. • Just when this pin's input comes from "H" to "L" level, the LED1 ~ LED7 and LOUD pins become "H".
⑨ ⑩	POWER ON POWER SW	• A rising level ("H" level) is detected at No. ⑩ pin to give an "L" level output to No.⑨pin (POWER ON). • When No. ⑩ pin is at "L" level, No.⑨pin is given an "H" level output (POWER OFF).
⑪	DECK	• When "Deck Play" code is fed from the remote control to No.⑦pin, the input selector is switched into TAPE 1 by a SELECTOR code output (No. ㉓ ~ No. ㉖ pins), causing an "H" level (when deck connection) output at No. ⑪ pin. • When "Deck Stop" code is inputted, an "L" level output is given at No. ⑪ pin.
⑫	ST/DTS	• When "Tuner" code is fed from the remote control to No.⑦pin, The DTS code is outputted at pin No. ⑫ SELECTOR code is then outputted to make the input selector into TUNER mode. • If the remote control's CH button has been kept depressed for longer than 1.5 seconds, 15 output pulses (AM code) are fed to the tuner and the number of pulses for a specified channel is given. • If the button has been released within 1.5 seconds 13 output pulses (FM code) are fed to the tuner and the number of pulses for a specified channel is given. 12.5ms, Read pulse, No. of pulses corresponding to the code DTS code pulses Function / No. of output pulses: CH 1 (CH 9) 0; CH 2 (CH 10) 1; CH 3 (CH 11) 2; CH 4 (CH 12) 3; CH 5 (CH 13) 4; CH 6 (CH 14) 5; CH 7 (CH 15) 6; CH 8 (CH 16) 7; FM 13; AM 15
⑬ ⑭	DATA/S1 CLK	Together with No. ⑫ pin, Volume UP/DOWN, Balance L/R and Loudness signals are fed to the attenuator IC.
⑮ ⑯	OSC 2 OSC 1	Crystal hook-up terminals for internal clock oscillator.
⑲	RES	Reset pulse input terminal. When a reset is made by the back-up circuit using electrolytic capacitors alone, 3 or 4 control RAM data are checked by the program. COLD START is activated when abnormal, HOT START when normal.
⑳ ㉑ ㉒	K2 K1 K0	Input terminals for matrix keys.
㉓ ㉔ ㉕ ㉖	D_A/SO D_B D_C D_D	Input selector 4-bits BCD codes are outputted with Remote Control codes. * With Turntable "START" code, the output is given in the order of No. 1 → No. 2 → No. 6 → No. 1. No. 8 and No. 9 code: Not provided in this unit's with remote control. No. / Selector / D_A / D_B / D_C / D_D: 1 — L L L H; 2 PHONO L L H L; 3 TUNER L L H H; 4 CD/AUX L H L L; 5 TAPE 1 L H H L; 6 TURNTABLE START H L L L; 7 TURNTABLE STOP H L L H; * 8 VCR/TAPE 2/EXT L H H H; * 9 VHD/AUX 2 L H L H
㉗	LOUD	Loudness on/off signal output terminal. * By pressing the LOUDNESS key, an "L" level output is given at this pin to turn on the loudness switch. Push the key again, and an "H" level output will come to turn off the loudness switch.

Notes:

(A) Key matrix, scanning signal input/output pins and their functions ("H" level scan)

OUT \ IN	K0 No.22	K1 No.21	K2 No.20
S0 No.23	Volume UP	Balance L	Loudness
S1 No.13	Volume DOWN	Balance R	



(B) Volume UP/DOWN

1. Push the key once, and the volume will turn up (or down) by 2dB each steps.
2. Keep the key depressed for more than 250msec, and the volume will turn up (or down) all the way automatically.
3. An "L" level output is given at LED1 ~ LED7 pins according to the volume attenuation.

(C) Balance LEFT/RIGHT

1. Push the key once, and the balance will shift to the left (or right) channel by 2dB. At the same time, the "Volume/Balance" indicator (LED1 ~ LED7) is switched to the Balance position. (The Balance indication goes on for about 4 ~ 6 seconds after the Balance key is released.)
2. Keep the key depressed for more than 500msec, the automatic shift mode will be invited.

• IC252 (DN74LS145) BCD Decoder

The microcomputer (IC251) codes are fed via its No. ㉓ ~ No. ㉖ pins to the IC252's No. ⑫ ~ No. ⑮ pins. An "L" level output is given according to the selector positions; now the input selector IC (IC201) receives the output as a switching signal. (For the input codes to IC252, refer to the list of codes under No. ㉓ ~ No. ㉖ pins of IC251.)

* Q256 is a transistor to keep Tape Deck 1 from switching from recording mode to playback mode, which might be otherwise caused by possible error data transfer from the remote control. (An "H" level input comes from the tape deck to the amplifier while in recording mode.)

* No.⑨pin is not used in this model.

AC IN

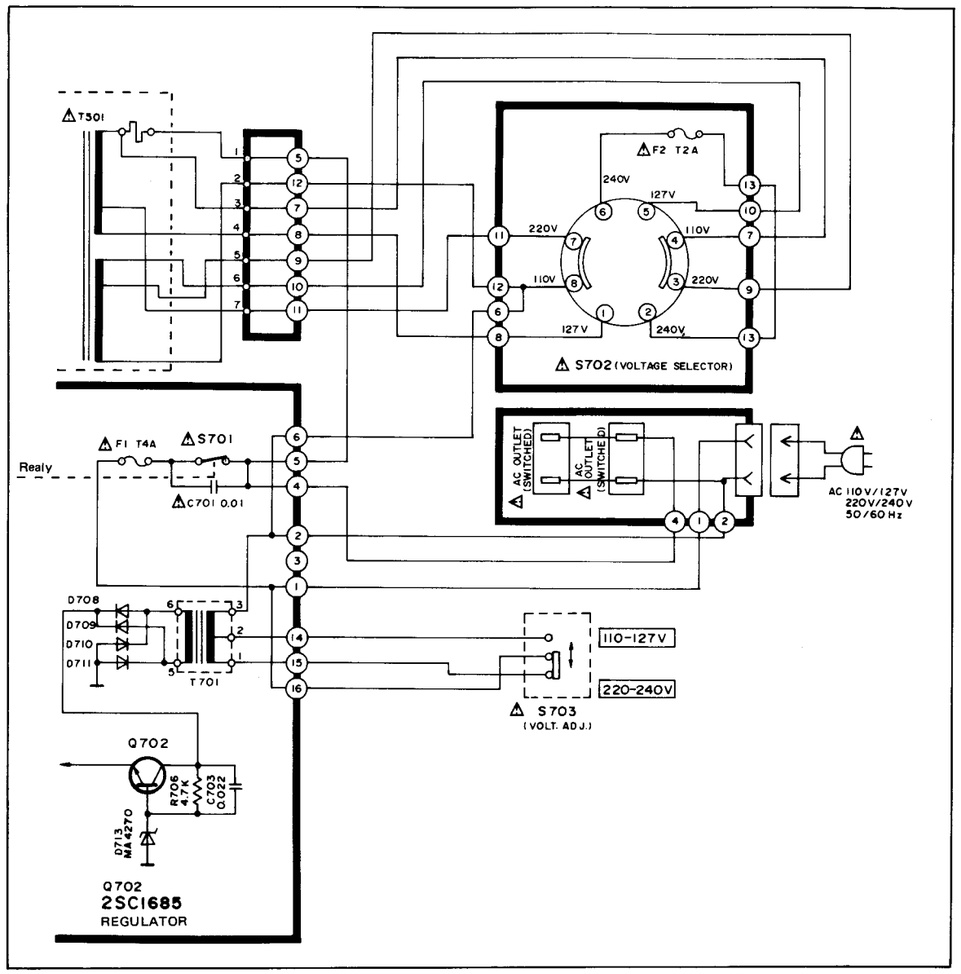
Short, for [EK, XL] area only

United Kingdom [EK] . . AC 2
Australia [XL] . . . . . AC 2
Continental Europe . . . . AC 2

DATA SIGNAL

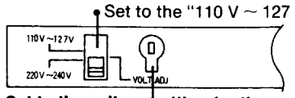
• **Power source circuit for other areas [XA]**



• **Before use**

WARNING: To avoid any serious damages, strongly be sure the voltage setting of the both voltage adjust switches according to the area.
Be sure to disconnect the mains cord before adjusting both voltage adjust switches.
Use a minus (–) screwdriver to set the voltage adjust switches.

1. **This amplifier is already set to the "220 V ~ 240 V" position before shipment.**
   If the power supply in your areas is 110 V ~ 127 V,
   Set to the "110 V ~ 127 V" position.



2. **Set to the voltage setting for the area in which the unit will be used.**
   (If the power supply in your area is 117 V or 120 V, set to the "127 V" position.)

Note:
There are no voltage adjust switches for some countries; the correct voltage is already set.

Measure against abnormality of memory function

a) Pull out the AC cord and check that the voltage at VDD terminal (pin No. 2) of IC251 (microcomputer) is +2V or over.
b) If the voltage is less than +2V, check that the battery voltage is +2V or over.
c) If the battery voltage is lower than +2V, replace the battery with new one.
* • Make sure that the battry voltage is +2V or over before setting the battery.
• Do not short-circuit between the plus and minus sides. Also, set the battery in correct position.

CAUTION

This lithium battery is critical component (Type No. BR2325-1VC, Mfr by Matsushita). Please observe proper polality and exact location when replacement and soldering in the replacement lithium battery.

■ SCHEMATIC DIAGRAM

(This schematic diagram may be modified at any time with the development of new technology.)

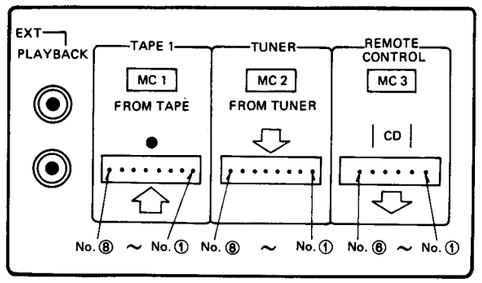
Notes :

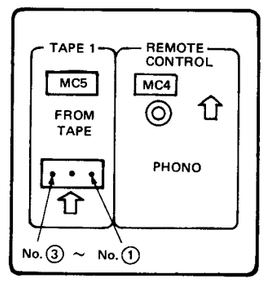
1. **S201** : Input selector, "**phono**" switch
2. **S202** : Input selector, "**Tuner**" switch
3. **S203** : Input selector, "**CD/Aux**" switch
4. **S204** : Input selector, "**Tape 1**" switch
5. **S205** : Input selector, **Tape 2/Ext**" switch
6. **S251** : Volume, "**Up**" switch
7. **S252** : Volume, "**Down**" switch
8. **S253** : Balance, "**Left**" switch
9. **S254** : Balance, "**Right**" switch
10. **S255** : Loudness switch
11. **S256** : Power switch in "**on**" position. (▮ standby, ▬ on)
12. **S501** : Main speakers switch in "**on**" position.
13. **S502** : Remote speakers switch in "**on**" position.
14. **S701** : Main power supply switch (with relay) in **"on"** position.
15. **S702 (For [XA] area only)** : Voltage adjust switch in **"220V"** position. (127V ↔ 110V ↔ 220V ↔ 240V)
16. **S703 (For [XA] area only)** : Voltage adjust switch in **"220–240V"** position. (110 – 127V ↔ 220 – 240V)
17. Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
    Measurement condition :
    Input Selector → Tuner (no signal)
    Volume Ind. → Level "1" light-up
    Loudness → off
18. Signal lines (L channel) phono
19. Positive (+B) voltage lines
    Negative (–B) voltage lines
20. Important safety notice:
    Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

*** Caution !**

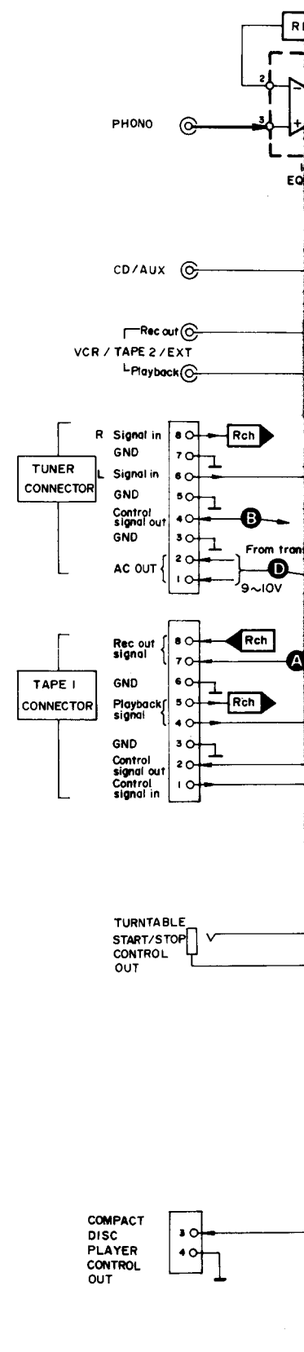
IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.
* Cover the parts boxes made of plastics with aluminum foil.
* Ground the soldering iron.
* Put a conductive mat on the work table.
* Do not touch the legs of IC or LSI with the fingers directly.

• **DECK/TUNER/CD player Connection Terminal of Rear panel**

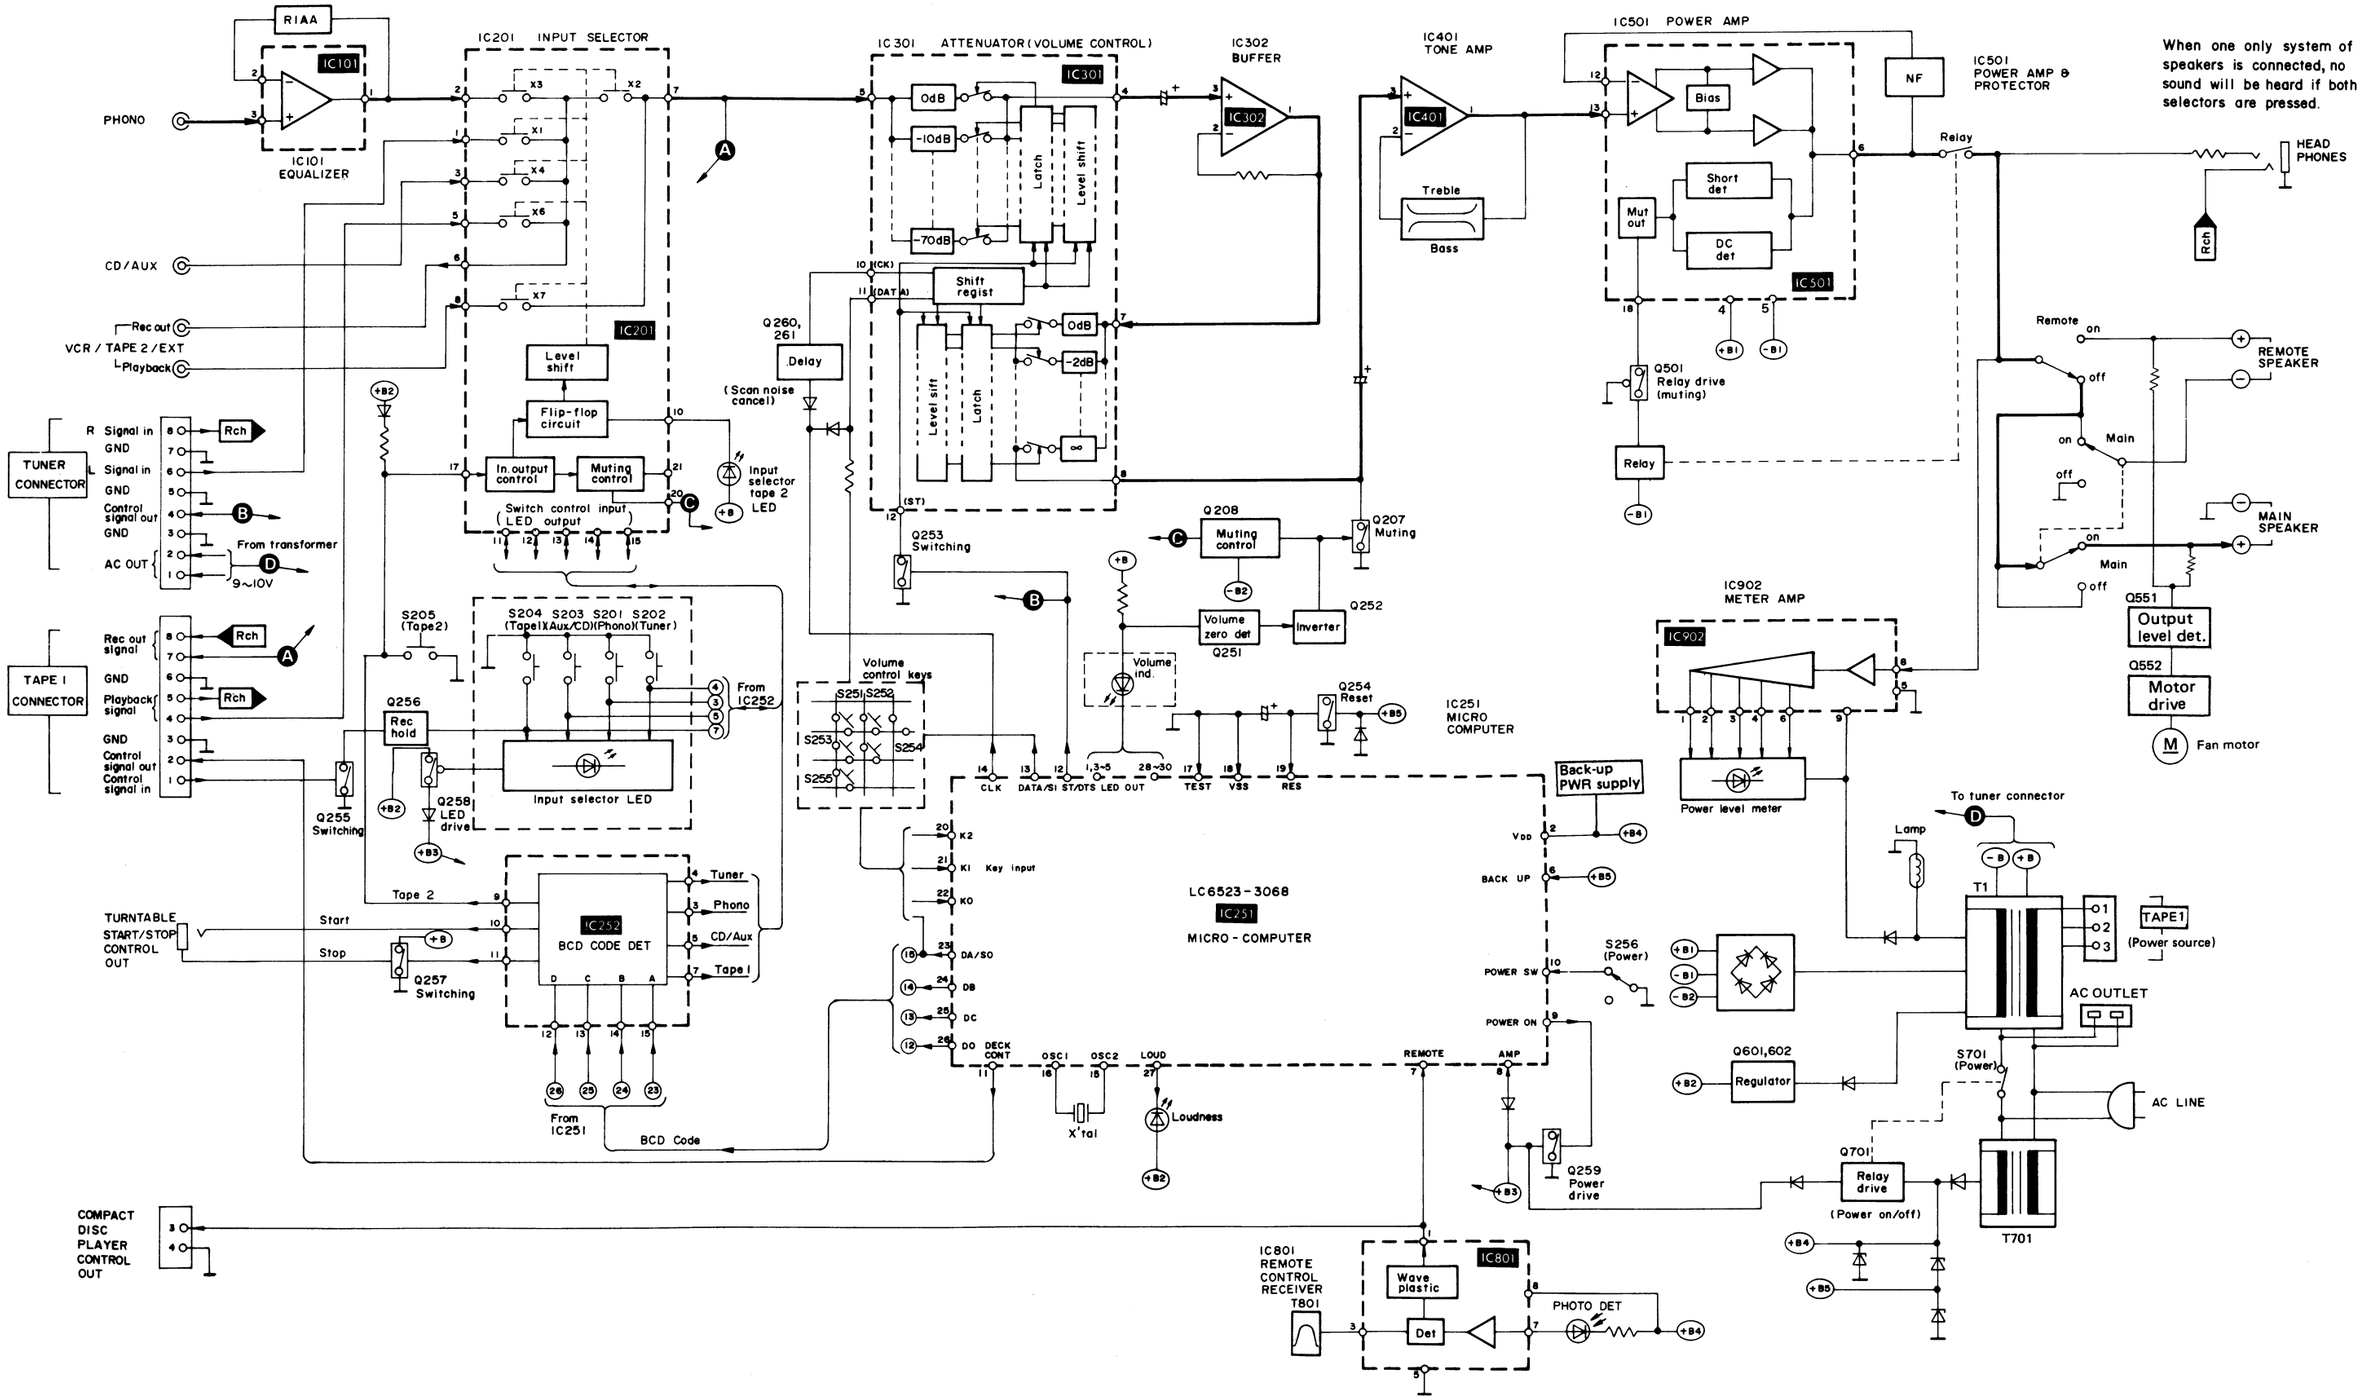




■ BLOCK DIAGRAM



■ BLOCK DIAGRAM



■ REPLACEMENT PARTS LIST

Notes: 1. Part numbers are indicated on most mechanical parts. Please use this part number for parts orders.
2. Important safety notice: Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
3. Bracketed indications in Ref. No. columns specify the area. Parts without these indications can be used for all areas.
4. The parenthesized numbers in the column of description stand for the quantity per set.
5. The unit of resistance is OHM (Ω). K = 1000Ω, M = 1000KΩ
6. The unit of capacitance is MICROFARAD (μF). P = 10^{-6}μF

Numbering System of Resistor

Example

ERD	25	F	J	101
Type	Wattage	Shape	Tolerance	Value

Resistor Type	Wattage	Tolerance
ERD : Carbon	12 : 1/2W	J : ±5%
ERG : Metal Oxide	2A : 2W	K : ±10%
ERC : Solid	S2 : 1/4W	
	25 : 1/4W	
	S1 : 1/2W	

Numbering System of Capacitor

Example

ECKD	1H	102	Z	F
Type	Voltage	Value	Tolerance	Peculiarity

Capacitor Type	Voltage				Tolerance
ECE : Electrolytic	0J : 6.3V	1V : 35V	1C : 16V	1E : 25V	K : ±10%
ECC : Ceramic	D : 25V	1H : 50V	66V : 66V	1J : 63V	Z : +80%, −20%
ECK : Ceramic	KC : 400V AC	2A : 100V	2H : 500V		M : ±20%
ECF : Semi-conductor					P : +100%, −0%
ECQ : Polyester
